

Sample Quiz 4, Math 1554, Fall 2019

PLEASE PRINT YOUR NAME CLEARLY IN ALL CAPITAL LETTERS

First Name _____ Last Name _____

GTID Number: _____

Student GT Email Address: _____@gatech.edu

Section Number (e.g. A4, M2, QH3, etc.) _____ TA Name _____

Student Instructions

- **Show your work** and justify your answers for all questions unless stated otherwise.
- **Organize your work** in a reasonably neat and coherent way.
- Calculators, notes, cell phones, books are not allowed.
- Use dark and clear writing: your exam will be scanned into a digital system.
- Exam pages are double sided. Be sure to complete both sides.
- Leave a 1 inch border around the edges of exams.
- Any work done on scratch paper will not be collected and will not be graded.

Math 1554, Sample Quiz 4. Your initials: _____

You do not need to justify your reasoning for questions on this page.

1. (3 points) Indicate whether the statements are true or false.

| true | false | |
|-----------------------|-----------------------|--|
| <input type="radio"/> | <input type="radio"/> | If $A \in \mathbb{R}^{2 \times 2}$, $A = A^T$, and A has distinct eigenvalues λ_1 and λ_2 , the corresponding eigenvectors \vec{v}_1 and \vec{v}_2 are orthogonal. |
| <input type="radio"/> | <input type="radio"/> | The quadratic form $Q = -x^2 - 2xy - y^2$ is negative definite. |
| <input type="radio"/> | <input type="radio"/> | $2x^2 - 2xy + y^2 \geq 0$ for all real values of x and y . |

2. (4 points) If possible, give examples of the following.

- (a) A non-zero 2×2 elementary matrix, A , that can be diagonalized as PDP^T .

$$A = \begin{pmatrix} & \\ & \end{pmatrix}$$

- (b) An indefinite quadratic form that has no cross terms, and is expressed in the form $Q = \vec{x}^T A \vec{x}$, where $\vec{x} \in \mathbb{R}^2$.

$$Q(\vec{x}) =$$

3. (3 points) Fill in the blanks.

- (a) A unit vector that gives the location of the maximum value of $Q(\vec{x}) = x_1^2 - 2x_2^2$

subject to $\vec{x}^T \vec{x} = 1$, $\vec{x} \in \mathbb{R}^2$, is $\begin{pmatrix} & \end{pmatrix}$.

- (b) \vec{p} is an eigenvector of A with unit length that corresponds to eigenvalue $\lambda = 12$. The value of $\vec{p}^T A \vec{p}$ is .

- (c) The maximum value of $Q = \vec{x}^T A \vec{x} = \vec{x}^T \begin{pmatrix} 3 & 0 & 0 \\ 0 & 2 & 0 \\ 0 & 0 & -1 \end{pmatrix} \vec{x}$ subject to the constraints

$\vec{x}^T \vec{x} = 1$ and $\vec{x} \cdot \begin{pmatrix} 1 \\ 0 \\ 0 \end{pmatrix} = 0$ is equal to .

Answers

1. True/false: all statements are true.

2. Example construction.

(a) for example, $\begin{pmatrix} 2 & 0 \\ 0 & 1 \end{pmatrix}$

(b) for example, $A = \begin{pmatrix} x_1 & x_2 \end{pmatrix} \begin{pmatrix} 1 & 0 \\ 0 & -1 \end{pmatrix} \begin{pmatrix} x_1 \\ x_2 \end{pmatrix}$. There must be negative and positive eigenvalues.

3. FITB.

(a) $\begin{pmatrix} 1 \\ 0 \end{pmatrix}$

(b) 12

(c) 2
